XO x Beontag

Timekeeper pilot | Meeting cheat sheet

13 October 2026 | 14:45-15:15 CEST | Introduction, prototype facts and next steps.

INTRODUCTION

Hi Asia and Giovanni, thank you for taking the time.

XO is a gamified world for collaboration, collecting and stories that continue.

We bring characters, shared experiences and a reason to return. Makers, brands and collectors can help shape each connected object's journey.

Your expertise can provide the reliable connection between the physical object and its record. XO adds the invitation to explore, take part and return.

The Timekeeper is our first small test. Which practical route would you recommend, and what would you need from us?

Show the possibility

An imagined creator watch: maker, documented event, distributor, collector. Only the actual event-used piece carries that claim. A numbered edition shares the release story and then builds its own history.

Then return to Timekeeper

One figure and one World Card. The demo taps are simulated. Our sculptor has shared preliminary dimensions; we would like your advice before fixing the tag position.

The game is an invitation

game.xo.box is live for 2-7 people, free to explore afterwards. Its record shows participation, not verified product provenance.

If blockchain comes up

Would your existing services add value here? It is optional for the pilot.

SCULPTOR UPDATE

Tomáš Nečas | Big Child Room

Preliminary dimensions, received 12 October

Figure height	Foot length	Waist width
80 mm	~17 mm	~25 mm
100 mm	~21 mm	~33 mm

External measurements only; usable tag space is not yet confirmed.

Material & timing

Resin. Stage 1: no metal or NFC. Digital model expected by the end of this week; renders for review before production. NFC follows separately.

Placement to review together

Shoe sole, torso/waist or base. No location is selected. Wall thickness and cavity can be adjusted to the complete tag and antenna requirements.

What we need / first proof

A technical contact, sample tags and embedding guidance. A reliable phone scan should open the correct XO record; its history can be saved, retrieved and exported.

Three questions to move forward

1. Which tag, antenna and placement suit these dimensions and a World Card?
2. What wall thickness, scan tests and tamper options should Tomáš allow for?
3. What are sample, setup and recurring costs, minimum order and lead time?

Close with a concrete next step

Could we agree on next steps and a follow-up? I will coordinate with Tomáš.
